Data Analyst

SUMMARY

Master of Science in Business Analytics (MSBA) candidate and Economics graduate specializing in predictive modeling, time series forecasting, and econometric analysis. Builds and validates regression models in R, Python, SQL, Excel, and Tableau, including seasonal decomposition for multi-period demand forecasting and Feasible Generalized Least Squares (FGLS) to correct heteroskedasticity in large datasets. Translates complex analysis into clear, actionable recommendations, with a record of driving measurable operational improvements in a fast-paced retail environment.

EDUCATION

Wake Forest University School of Business, Winston-Salem, NC May 2027
Master of Science in Business Analytics (MSBA)

Florida Southern College, Lakeland, FL May 2025
Bachelor of Science in Economics, Minor in Business Analytics

SKILLS

Programming: Python, R, SQL

Tools & Libraries: Excel (PivotTables), Tableau, Pandas, scikit-learn, Keras, Google Colab

Statistical Methods: Linear Regression, Logistic Regression, Regularized Regression, Decision Trees, Time Series Forecasting, Seasonal Decomposition, FGLS / Heteroskedasticity Correction, Neural Networks (Siamese CNNs), Hypothesis Testing

Analysis: Exploratory Data Analysis (EDA), Data Visualization, Data Mining, Statistical Analysis, Forecasting & Trend Analysis, Economic Modeling, Data Interpretation, Reporting

Professional: Cross-Functional Collaboration, Business Communication, Problem-Solving, Teamwork, Time Management, Attention to Detail

PROJECTS

ECG Patient Matching – Wake Forest School of Medicine Build-A-Thon *Python, Keras*

- Collaborated on a four-person team to build a deep learning model that scores whether a hospital ECG and an Apple Watch ECG come from the same patient, blending three Siamese CNNs with a heartbeat-feature neural network trained on 37,000+ MIMIC-IV ECGs.
- On unseen patients, ranked the true match above a stranger 98% of the time (0.984 AUROC) and identified the correct patient out of 48 on the first try 79% of the time (vs. 2% by chance).
- Reproduced results end to end, tested for overfitting, and presented findings to judges.

Econometric Analysis of Global Life Expectancy *R*

- Analyzed panel data from 150+ countries to identify drivers of life expectancy, building and comparing 10+ regression models with interaction terms, nonlinear effects, and FGLS correction for heteroskedasticity.
- Final model achieved up to 77% explanatory power (adjusted R^2) and produced data-driven policy recommendations based on education, mortality, GDP per capita, and resource access.

Regional Hospital Patient Volume Forecast *Excel*

- Analyzed 28 months of daily patient census data to isolate day-of-week and monthly seasonality using PivotTable-derived seasonal indices.
- Built a deseasonalized linear regression trend to forecast three months (Nov–Jan), then reseasonalized results by month and day to deliver staffing and resource-allocation recommendations.

PROFESSIONAL EXPERIENCE

Publix Super Markets July 2023 – Present
Produce Clerk

- Trained new hires on operational procedures and best practices, contributing to a 10–30% reduction in waste-related losses and a 5–15% improvement in gross margins.
- Delivered customer service that built satisfaction and loyalty, and collaborated with team members on cross-functional tasks to support department performance.
- Recognized as Employee of the Month for leadership, reliability, and consistent performance.
