D'MARLEY GRANT

granda26@wfu.edu | 863.392.0280 | linkedin.com/in/dmarleygrant

ANALYST

MSBA Candidate and Economics graduate specializing in predictive modeling, time-series forecasting, and econometric analysis. Proficient in R, Python, SQL, and Tableau to build and validate regression-based models, including seasonal decomposition techniques for multi-period demand forecasting and Feasible Generalized Least Squares (FGLS) methods for correcting heteroskedasticity across large-scale datasets. Combines rigorous statistical training with collaborative, team-based project experience translating complex analysis into clear, actionable recommendations, complemented by a proven record of driving measurable operational improvements in fast-paced work environments.

EDUCATION

Wake Forest University School of Business, Winston-Salem, NC
Master of Science in Business Analytics, *May 2027*

Florida Southern College, Lakeland, FL
Bachelor of Science in Economics with Business Analytics Minor, *May 2025*

AREAS OF EXPERTISE

Teamwork | Problem-Solving | Quantitative Analysis | Business Communication | Time Management | Cross-functional Collaboration

Data Visualization | Data Mining | Statistical Analysis | Excel | Tableau | Forecasting & Trend Analysis | Reporting | Perceptive | AI |

Big Data Technologies | Data Interpretation | Engaging Customer Service | Active Listening | Attention to Detail | Economic Modeling

TECHNICAL SKILLS

Programming Languages: Python, R, SQL
Predictive Modeling & Statistical Analysis: Linear Regression (Heteroscedasticity), Logistic Regression (Heteroscedasticity), Time Series Analysis, Tree Decision Modeling, Regularized Regression
Data Analysis & Experimental Design: Exploratory Data Analysis (EDA), Hypothesis Testing, Data Visualization, Pandas, Sklearn
Google Cloud (GCP): Colaboratory

PROFESSIONAL EXPERIENCE

PUBLIX SUPER MARKET

PRODUCE CLERK *July 2023 – Present*

- Demonstrated leadership by taking the initiative to train new hires on operational procedures and best practices to cut waste-related losses by **10–30%** and improve gross margins by **5–15**%.
- Built customer relationships by providing exceptional customer service, engaging with customers to meet diverse customer needs, ensuring satisfaction and loyalty. Collaborated with team members to ensure department success and support cross-functional tasks.
- *Recognized as Employee of the Month for leadership, reliability, and consistent performance.*

ANALYTICAL PROJECT EXPERIENCE

Econometric Analysis of Global Life Expectancy: Analyzed panel data from 150+ countries in R to identify drivers of life expectancy, building and comparing 10+ regression models with interaction terms, nonlinear effects, and FGLS correction for heteroskedasticity The final model achieved up to 77% explanatory power (adjusted R^2) and generated actionable, data-driven policy recommendations based on the effects of education, mortality, GDP per capita, and resource access.

Predictive Analytics: Regional Hospital Patient Volume Forecast: Analyzed 28 months of daily patient census data in excel to isolate day-of-week and monthly seasonality using PivotTable-derived seasonal indices. Built a deseaonalized linear regression trendline to generate a three month (Nov-Jan) forecast, then reseasonalized results by month and day to deliver staffing and resource-allocation recommendations.

Deep Learning: ECG Patient Matching (Wake Forest School of Medicine Build-A-Thon): Collaborated in a four-person team to build a Python/Keras model that scores whether a hospital ECG and an Apple Watch ECG come from the same patient, blending three Siamese CNNs with a heartbeat-feature neural network trained on 37,000+ MIMIC-IV ECGs. On patients it never saw, the model ranked the true match above a stranger 98% of the time (0.984 AUROC) and picked the right patient out of 48 on the first try 79% of the time (vs. 2% by chance). Reproduced results end to end, tested for overfitting, and presented findings to judges.
